Peer review of BU curriculums

November 2014

This project has been funded with support from the European Commission. This publication reflects the views only of the author, and the Commission cannot be held responsible for any use which may be made of the information contained therein.

This peer review is under WP 5.1 where STU as a consultant provides evaluation of curriculums modernization which took place in partner university BU.

Intellectual property protection – patents and patent documents

Intellectual property is a very actual subject and it has an important role in the product development. The Course is focused on issues of the basic knowledge of technical regulations. Based on general goals it is possible to validate that all relevant subjects are well covered by curriculums. Number of lessons is appropriate for this kind of subject to cover all the goals. For better preparation of students for intellectual property protection, there should be some small improvements eligible. Firstly, they should be encouraged to prepare their own ideas to be patented. Secondly, it is very important to teach students how to present their work in administration language. This idea is meant to be a nonwritten intent of the subject. All in all these lectures and evaluation process are well organized. STU recommends these curriculums as a part of BU learning process.
