F. OCENA O REZULTATIMA NAUČNOG I ISTRAŽIVAČKOG RADA

Prof dr Katarina Lalić je do sada bila autor ili koautor u 633 publikovana rada (prvi autor u 91 radu) (ukupni kumulativni IF 245,018) objavljenih kao originalni radovi in extenso u časopisima sa JCR liste (44) (kumulativni IF 84,148); ostali radovi u časopisima sa JCR liste (23) (kumulativni IF 160,870); radovi u časopisima indeksiranim u MEDLINE-u (8); ceo rad u časopisu koji nije indeksiran u gore navedenim bazama podataka (12); ceo rad u zborniku nacionalnog skupa (13); izvod u zborniku međunarodnog skupa (336); izvod u zborniku nacionalnog skupa (184); udžbenici, praktikumi (1); poglavlja u udžbenicima, praktikumima (3) i poglavlja u monografijama, knjigama (9). Analiziranjem po temama publikovanih radova u čijoj je izradi kandidat učestvovao, može se utvrditi nekoliko dominantnih područja rada, širok opseg tema kao i kontinuitet rada na temama kojima se kandidat bavio. Najveći broj publikacija se bavi naučnim problemima u oblasti insulinske rezistencije, insulinske sekrecije, metabolizma glukoze i lipoproteina i pojave gojaznosti kao i povezanosti ovih poremećaja sa vaskularnim komplikacijama u dijabetesu. Posebno su značajna ispitivanja različitih aspekata insulinske rezistencije, kako u dijabetesu tako i nedijabetičara, u kojima je korišćen veliki broj različitih složenih najsavremenijih metoda (insulinska klamp tehnika, indirektna kalorimetrija, metoda minimalnog modela). Takođe, od velikog značaja su i studije povezanosti poremećaja insulinske rezistencije, hiperinsulinemije, gojaznosti, poremećaja lipoproteina, antioksidatnog statusa i fibrinolize s jedne strane i s druge strane pojave koronarne bolesti u dijabetičara i nedijabetičara, a sintezu ovih istraživanja predstavlja magistarski rad i posebno doktorska disertacija Dr Katarine Lalić u kojoj su detaljno i kompleksno analizirani odnosi poremećaja insulinske senzitivnosti i sekrecije i mehanizama aterogeneze u velikog broja insulin-nezavisnih dijabetičara, što predstavlja jednu od najvećih studija ove vrste u našoj sredini. Na osnovu rezultata ovih ispitivanja, kandidat je bio predavač po pozivu na uglednim skupovima nacionalnog značaja, kao i na seminarima kontinuirane edukacije organizovanim od strane Medicinskog fakulteta Univerziteta u Beogradu. Sledeću veliku grupu radova čine ispitivanja autoimunog odgovora koji je u osnovi patogeneze tipa 1 dijabetesa, a izdvajaju se studije povezanosti poremećaja fenotipskih karakteristika imunoregulatornih T limfocita periferne krvi i pojave kliničke remisije u pacijenata sa novootkrivenim insulin-zavisnim dijabetesom koje su dale rezultate objavljene u monografiji i časopisima međunarodnog značaja. Istovremeno, u istoj oblasti, poseban značaj imaju proučavanja kliničkog značaja određivanja antitela na ćelije pankreasnih ostrvaca u novootkrivenih tip 1 dijabetičara i naročito njihov prognostički značaj u ranoj fazi ovog oboljenja. Velika grupa radova proistekla je i iz angažovanja kandidata u okviru tima koji je sprovodio pripremu kulture izolovanih fetalnih ostrvaca i njihove implantacije u pacijenata sa tipom 1 dijabetesa. U ovu grupu spadaju i brojne in vitro studije mogućnosti poboljšanja sposobnosti insulinske sekrecije izolovanih humanih fetalnih i adultnih ostrvaca. Iz ove oblasti, poseban doprinos predstavljaju i radovi u kojima su izloženi rezultati kliničkih efekata transplantacije izolovanih ostrvaca endokrinog pankreasa u pacijenata sa tipom 1 dijabetesa, kao nove terapijske metode koja je prvi put primenjena u našoj sredini. Rezultati iz ove oblasti su publikovani u radovima in extenso u internacionalnim časopisima. U celini, publikovani radovi odražavaju svestrano angažovanje kandidata Dr Katarine Lalić, u okviru istraživanja tima čiji je član, u radu na brojnim zadacima iz kliničkih kao i fundamentalnih studija u toku koga se formirala kao stručnjak i istraživač u oblasti dijabetologije i endokrinologije. Takođe, objavljeni radovi ukazuju da se Dr Katarina Lalić izdvaja kao kompetentan istraživač naročito u oblasti proučavanja metaboličkih aspekata makrovaskularne bolesti i drugih komplikacija u dijabetesu gde se afirmisala dajući poseban samostalni doprinos, a takođe i u okviru timskog rada na izučavanju imunoloških i metaboličkih parametara u ranoj fazi insulin-zavisnog dijabetesa, kao i kliničkog značaja transplantacije ostrvaca endokrinog pankreasa u tipu 1 dijabetesa.

U naučnoj i stručnoj aktivnosti, Dr Milan Petakov je bio autor ili član autorskog tima u 424 radova i izvoda, kao i 9 poglavlja u knjigama i monografijama. Od ukupnog broja radova u celini (97) sa JCR liste je 55 radova od kojih je 20 napisano posle prethodnog izbora u zvanje. Dr Petakov je prvi autor u 2 rada (pre izbora) a nosilac 2 rada (posle izbora). Od ostalih radova 3 rada je sa JCR liste, 3 je u časopisima indeksiranim u Medline-u (pre izbora), 12 je celih radova koji nisu indeksirani u navedenim bazama podataka (pre izbora), 1 rad je objavljen kao ceo rad u zborniku međunarodnog skupa (pre izbora), a 22 rada su celi radovi u zbornicima nacionalnog skupa (pre izbora). Ukupno je bilo 244 izvod u zbornicima međunarodnog skupa, od toga posle prethodnog izbora 53 rada pri čemu je dr Petakov jedini autor u 2 rada, koautor u 40 radova, a nosilac u 11 radova. Od ukupno 86 izvoda objavljenih u zbornicima nacionalnog skupa, posle prethodnog izbora objavljeno je 29 izvoda, od kojih je dr Petakov jedini autor 6 izvoda, koautor 17, a nosilac u 6 izvoda..

Analiziranjem po temama publikovanih radova u čijoj je izradi kandidat učestvovao, može se utvrditi nekoliko dominantnih područja rada, širok opseg tema kao i kontinuitet rada na temama kojima se kandidat bavio.

Najveći broj publikacija se bavi naučnim problemima u oblastima neuroendokrinologije, endokrinoloških tumora. Radovi i saopštenja u kojima je kandidat učestvovao kao autor ili koautor, odnosili su se na različite teme iz oblasti endokrinologije i dijabetologije, pre svega neuroendokrinologije sa posebnim osvrtom na oblasti hipofiznih tumora, reproduktivne endokrinologije, patologije štitaste žlezde, poremećaja metabolizma kostiju ali i drugih oblasti endokrinologije.

Posebno interesovanje kandidat je pokazao za neuroendokrinu regulaciju reproduktivne funkcije i lečenje hipogonadotropnih stanja, što je potvrđeno i izradom magistarske teze iz ove problematike, sa ispitivanjem efikasnosti lečenja hipogonadotropnih stanja hipotalamuse geneze kod žena, primenom pulsatilne pumpe za gonadotropin-oslobađajući hormon (GnRH), ali i ispitivanjem primene pulsatilne stimulacije sa GnRH kao dijagnostičnog testa u diferencijalnoj dijagnozi različitih hipogonadotropnih poremećaja.

Radovi iz poremećaja metabolizma kostiju odnosili su se na pre svega na terapijski pristup lečenju idiopatske postmenopauzne osteoporoze pre svega analogom D3 vitamina (1-alfa hidroksihoalekalciferol) i kalcijumom.

Radovi iz oblasti neuroendokrinologije odnosili su se najvećim delom na oblast tumora hipofize pre svega dijagnostike različitih sekretornih hipofiznih adenoma, naročito somatotropnih adenoma, primenom određenih laboratorijskih parametara kao što su insulinu-sličnog faktora rasta-1, samog hormona rasta bilo u tzv. dnevnom profilu ili tokom oralnog opterećenja šećerom. Takođe, određeni radovi usmereni su i na dijagnozne probleme kod prolaktinoma (tzv. "hook fenomen") u slučaju korišćenja imunoradiometrijskih metoda merenja prolaktinemije, što može imati i određene posledice po same pacijente ukoliko se ne postavi precizna dijagnoza o sekretornog prirodi tumora. Pojedini radovi procenjuju i efikasnost operativnog lečenja pojedinih hipofiznih tumora pre svega kod akromegalije kao oboljenja sa značajnim rizikom od dugoročnog kardiovaskulnog mortaliteta kao i obolevanja od različitih dobroćudnih i zloćudnih tumora ukoliko je radikalno lečenje neefikasno. Sintezu ovih istraživanja predstavlja doktorska disertacija Dr Milana Petakova u kojoj su detaljno i kompleksno analizirani klinički dijagnostički i terapijski aspekti problema hipersekrecije hormona rasta, naročito značaj određivanja IGF-1 kod akromegalije, što značajno doprinosi postavljanju određenih racionalnih dijagnostičkih standarda kod ove bolesti.

Kao saradnik kandidat je bio uključen u veliku studiju praćenja kardijalnih (ehosonografskih) parametara u proceni rizika kardiovaskulnog obolevanja kod akromegalije, ali i epidemiološku studiju povećanog morbiditeta i mortaliteta ovih bolesnika.

Naročito je aktuelno učešće kandidata kao saradnika u radovima posvećenim proučavanju produkcije leptina od strane adipocita u različitim patološkim stanjima (insulinomi, anoreksija), kao i značaja primene drugih sekretagoga kao što je oslobađajući peptid za hormon rasta (GHRP-6) u ispitivanju sekretornog hipofiznog kapaciteta za ovaj hormon u različitim bolestima (akromegalija, makroprolaktinomi).

Velika grupa radova proistekla je i iz angažovanja kandidata u okviru tima Centra za endokrino-zavisne tumore i nasledne kancerske sindrome sa velikim značajem u genetskoj dijagnozi retkih tumorskih sindroma u tzv. prekliničkom stadijumu bolesti što omogućava blagovremeno profilaktičko lečenje i izlečenje od ovih obično malignih stanja.

Poslednja grupa radova je iz oblasti lizozomalnih naslednih bolesti uskladištenja, specijalno Gošeeve bolesti gde je dr Milan Petakov član grupe naučnika koji se bave ovom problematikom u sklopu kliničkih studija lečenja Gošeeve bolesti.

U celini, publikovani radovi odražavaju svestrano angažovanje kandidata Dr Milana Petakova, u okviru istraživanja tima čiji je član, u radu na brojnim zadacima iz kliničkih kao i fundamentalnih studija u toku koga se formirao kao stručnjak i istraživač u oblasti endokrinologije. Takođe, objavljeni radovi ukazuju da se Dr Milan Petakov izdvaja kao kompetentan istraživač naročito u oblastima endokrino-zavisnih tumora, poremećaja štitaste žlezde kao i metabolizma minerala i kostiju, gde se afirmisao dajući poseban samostalni doprinos, a takođe i u okviru timskog rada na proučavanju bazičnih i kliničkih parametara kod hipofiznih tumora kao i neuroendokrinih tumora.
